

INFS2044 Workshop 2b Stock Trading System Requirements

Use Cases

The system should enable in-house traders to:

- Buy and sell stocks
- Schedule trades
- Issue reports
- Analyse the trades

Other Requirements

- The users of the system utilize a browser to connect to the system and manage connected sessions, completing a form and submitting the request.
- After a trade, report, or analysis request, the system sends an email to the users confirming their request or containing the results.
- The data should be stored in a local database.
